

Harbours Engineer

Permanent

Head Office - Port Glasgow

Area - West Coast of Scotland and Western Isles

Competitive salary and benefits

Caledonian Maritime Assets Ltd (CMAL) provides vessels and harbour infrastructure for ferry services throughout Scotland. This position offers an exciting opportunity in a client role to be involved with asset maintenance and projects relating to CMAL's harbours. The role will involve frequent travel across Scotland.

With a degree in civil engineering or equivalent, and Chartered status, you will have extensive project and/or asset management experience and preferably a background in marine engineering.

Reporting to the Principal Planning Engineer, you will oversee the development, scoping and planning of capital and refurbishment projects for harbour infrastructure. You will be responsible for instigating the early stages of multiple projects, in order to fully define the scope of deliverables, and will work with consultants, contractors, the port/ferry operator and local communities/groups.

Experience of stakeholder engagement and public consultation is desirable. You will also have a proactive approach with excellent communication, organisational and problem solving skills.

The role will require site meetings and inspections, sometimes in the evening or at weekends.

A driving licence and a flexible approach to work are essential. Salary is dependent on qualifications and experience, with benefits including a defined benefit pension scheme, life assurance and healthcare.

Please contact info@cmassets.co.uk) to request a job description and person specification.
